

## Hygienic Stainless Steel Tanks and Vessels

Stainless steel atmospheric and pressure rated hygienic tanks, vessels, processors and mixers.

### Introduction

CIPProcess engineers have been specifying and designing stainless steel tank and vessels for over 20 years. We supply high quality stainless steel tanks from 3 to 300,000 litre capacity. We can offer these as a supply service but are often asked to integrate them into systems. Our integration services include concepts, design, calculation, CIP, pipework, skids, systems, mixing, transfer, gantries, automation and recipe control.

### Range

CIPProcess tanks and vessels provide a total solution for liquid mixing and storage in the hygienic processing industries. We offer both standard ranges — comprising the most commonly requested tanks and vessels with a choice of optional extras — or in bespoke configurations with your choice of equipment options. Standard or custom-built, they are available either as pressure or atmospheric vessels. With propeller, blade, scraped surface, anchor and high shear mixers available, CIPProcess tanks and vessels are one element of our product range, which incorporates a diverse range of CIP and Processing equipment.
